VOL. III — ALPHABETICAL INDEX

**A WORKING MANUAL**

*Published by Authority of*  
The Minister of Trade and Commerce

September 1963  
1601-504

Price: \$4.00

This is one of a series of three  
publications on the  
**Standard Commodity Classification**  
prepared by the  
Dominion Bureau of Statistics

Catalogue number	Title	Price
12-502	Volume I—The Classification .....	\$2.00
12-515	Volume II—Classified Index .....	4.50
12-516	Volume III—Alphabetical Index .....	4.00

## INTRODUCTION

The structure of the Standard Commodity Classification and the principles used in its development are outlined in the Introduction to Volume I. The present volume contains an alphabetical index in which commodity terms and alternative designations are shown with the corresponding code numbers. This index is an aid to coding and provides a means for consistent application of the classification by different users. It is a companion to Volume II, the Classified Index, in which these same terms are arranged under the class headings of Volume I.

### Special Notes

When a class heading consists of more than one word, it has been indexed under each **key word**. Thus, it may sometimes seem that the same designation has been repeated unnecessarily. When the designations are listed alphabetically, however, these different forms are required to aid in identifying the class regardless of how it is described. In many cases it was not necessary to cross-index commodity terms. Cross-indexing is limited also when a series of classes covers the same commodity but with different specifications, (e.g. woolen fabrics of different weights). In such cases the commodity terms can be referred to the group of classes and the class headings are self-explanatory.

A special effort has been made to assemble the different **parallel designations** used for the same commodity. These cases are encountered most frequently in the field of chemicals and chemical products.

Some **trade names** have been included when it was felt that they would assist in coding trade documents or otherwise in describing a class. Trade names are marked as follows—(T.N.) and they are used here only for the purpose of improving the statistics. If the mark (T.N.) has been inadvertently missed in any case, we would appreciate being informed.

The **spelling** in this volume follows, basically, the Oxford Dictionary. For purpose of coding import documents, however, it is necessary to include

alternative spellings, particularly in the alphabetical arrangement. Since the same cards are used for this volume and Vol. II, the alternative spellings are also found there. Such examples as tires and tyres, syrups and sirups, draughting and drafting, jewellery and jewelry, scarves and scarfs, orthopaedic and orthopedic, indicate the kinds of alternatives that have been included. Minor differences in spelling (e.g. colour and color) have not been duplicated, the Oxford spelling being the one used. In a few cases incorrect spellings that are commonly encountered have been included along with the correct spelling as an aid to coders (e.g. weiners and wieners).

Differences in terminology have also been taken into account in deciding which terms to include. For example, both "baby carriage" and "pram" will be found in the list as will both "electronic tubes" and "electronic valves". No attempt has been made to account for all such terminological differences but only for those most commonly encountered.

The manuscript for this volume was prepared from lists printed directly from punched cards. There were technical difficulties in using apostrophes and, therefore, they have been inserted by hand only when absolutely necessary to avoid misunderstanding of a commodity term.

### Keeping the lists up-to-date

New commodities and new forms of existing commodities are encountered constantly. The files upon which these indexes are based are kept up-to-date by the insertion of new descriptions as they are encountered. It is difficult, however, to keep pace with all the new developments taking place in industrial processes and in the use of new materials. Gaps, errors or inconsistencies found in this volume should be reported to the Dominion Bureau of Statistics. From time to time supplementary lists will be issued and the whole list will be amended periodically.

## INTRODUCTION

### LIST OF ABBREVIATIONS

A.C.	alternating current
cu. ft.	cubic foot
D.C.	direct current
etc.	et cetera
ex.	except
h.p.	horse-power
hr.	hour
in.	inch
incl.	including
kva.	kilovolt-ampere
kw.	kilowatt
lb.	pound
M.G.V.W.	maximum gross vehicle weight
mm.	millimetre
n.e.s.	not elsewhere specified (or included)
p.c.	per cent
r.p.m.	revolutions per minute
sq. ft.	square foot
(T.N.)	trade name
W (between words)	with
&	and
